# Symmetrical Asymmetrical Factorials Main Effect Plans

**chapter 8 factorial experiments - iit kanpur** - chapter 8 . factorial experiments . factorial experiments involve simultaneously more than one factor each at two or more levels. several factors affect simultaneously the characteristic under study in factorial experiments and the experimenter is interested in the main effects and the interaction effects among different factors. **discrete discrepancy in factorial designs - springer** - evaluate the uniformity of factorials. in this paper we give linkages among uniformity measured by the discrete discrepancy, generalized minimum ... discrete discrepancy in factorial designs hong qina; b and kai-tai fang b faculty of mathematics and statistics, central china normal university, wuhan 430079, china  $s \sim n(-1)(s-1)n$   $(s-1)2n \times x^*$ ! - **core** - this offers a new approach to the construction of generalized main effect plans for both symmetrical and asymmetrical factorials. two theorems of raktov and federer [1970] for the  $2^n$  factorial are extended to include the  $s^n$  factorial (theorems 2.1 and 2.2) and the  $n^s$  factorial (theorems 2.3 and 2.4). . ' .  $i=1$  in. **statistical package for factorial experiments (spfe) 1** - fractional factorial gives regular fractional factorials for main effects alone, or main effects and two factor interactions. selection of option balanced confounded designs provides a list of commonly used balanced confounded designs for symmetrical and asymmetrical factorial experiments. the details of **v1104747 orthogonal main-effect plans permitting ...** - to construct asymmetrical orthogonal resolution  $v$  designs from base plans which are symmetrical orthogonal resolution  $v$  plans. we prove that the collapsing technique can be used to construct orthogonal main-effect resolution  $v$  designs for  $n$  two-level factors and  $m$  three-level factors from a resolution  $iv$  **statistical package for factorial experiments 1.0: spfe 1** - regular fractional factorial plans for symmetrical factorial experiments. the data are analyzed as per procedure of blocked/ unblocked designs for single factor experiments. the treatment sum of squares can be partitioned into sum of squares due to main effects and interactions. a null hypothesis on any contrast of interest can also be tested.
